Six years working in the technology sector, with five of those as a data scientist and one as a technical lead. Scaled an asset diagnostic product from inception to three pilot projects with national rail services, built a startup's first revenue generating product using NLP models.

Professional Experience

Konux GmbH

August 2021 - August 2024 (3 years)

Tech lead (1 year)

- Scaled an asset monitoring product from one to three national pilot projects by automating the third party data ingestion. Designed and built multi tenant architecture that ingested customer and weather data into NoSQL DB. Built and ran custom [NI DAO](#) software in onsite railway calibration tests.

Data scientist (2 years)

- Researched and productionized novel ML and deep learning models to detect and categorize failure modes. Designed and built an event-driven alerting system using weather and temperature information as covariates to send urgent failures directly to clients. Took on tech lead responsibilities after a year.

Junior data scientist (6 months)

- Improved the amount of data usable for processing by 10% by developing a new algorithm for choosing valid railway traces. Promoted to data scientist after six months.

Advaisor.io (Defunct)

August 2019 - July 2021 (2 years)

Data scientist/Software engineer

- Raised first contact resolution in client-facing customer support from 60% to 80% by building a response recommendation system based on company document understanding. Researched and wrote advaisor's first algorithms for measuring language features of customer service texts using SoTA algorithms. Designed the first relational database schema and wrote parts of the backend unifying document data across our customer base.

Waymo (Google Self-Driving Car spinoff)

June 2017 - July 2018 (1 year)

Software Quality Analyst

- Prevented several dangerous software versions from being deployed to production by diagnosing faulty software components and triaging them to the responsible software departments. Selected to lead the team of 15 in weekly meetings demonstrating proper use of the software for triaging.

Education & Certifications

Bachelor of Science, Physics

University of California, Santa Barbara

- 3.3 major GPA (Equivalent to a 2:1)
- Technology Management Program, 2 published papers (JACS and Scientific Reports)

Data Science Program

Propulsion Academy/ETH Zurich

- Four month data science boot camp backed by ETH Zurich
- Built an Active Learning ML solution for Merakoi, a patient experience platform

Python • PySpark • Pandas • Pytorch • Tensorflow • Scikit-learn • AWS (Lambda, Glue, S3, SES) •
SQL • DynamoDB • NoSQL • Vector DBs • Git • SonarCloud • Splunk • DataDog •
Javascript/typescript • docker • LLMs • FastAPI • SonarCloud • Jenkins
